

BUSINESS ANALYTICS

an insurance digital solution by  **BSynchro**

Technology is rapidly catching up on the insurance industry, making the amount of data to deal with immeasurable. When it comes to analyzing that data, the process often leads to endless BI and Data Warehouse projects that make the management lose interest before they see the light. So how do Data Analytics deal with these issues? What Data Analytics offer is a change of mindset on how data should be analyzed using self-service tools.

It provides faster results with easy customization and flexibility in development, which most insurers lack the skills, budget, and know-how for. This is where Crow by BSynchro comes in handy, supported by a team of 70 professionals with an extensive experience with Insurers, Reinsurers, and TPAs.

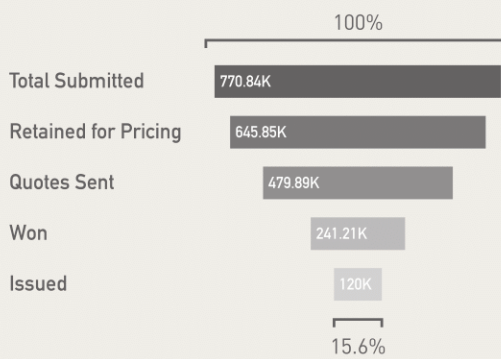

OVERVIEW

Crow will deliver Power BI Dashboards available online from any mobile and web to gain access to companies' critical information and clearly identify KPIs & Trends related to Organizational Units, Sales Channels, Agents, Products, etc. The product also provides the ability to drill down to customers, policies, covers, and more, in order to make better decisions based on scientific figures and visual diagrams. Receiving quick insights with classification, data correlation, and viewing outliers are also available from the dashboards. Crow can also deliver real-time reporting and tracking on operations using SQL Reporting Services.

FEATURES

- Cognitive services
